Setting up your Standard or Curtain Slip Fit Pipe System

Directions:

- Take the slip fit base and insert the nipple into the base. Gently screw the nipple into the bottom of the base until tight (be sure not to screw it in too tight as this may cause stripping). Set the base in the desired location face up with nipple pointing upwards. Complete the same process for the each base.
- Take the slip fit upright and insert the non slotted end onto the nipple. The upright should slip over the nipple and stand in an upright position.
- Take the curtain support and insert the aluminum end into the desired slot on the upright. The curtain support end will hook into the upright slot. Take the other end of the curtain support and hook into the slot of the next upright.
- Now you have two uprights and one curtain support hooked in between the two uprights. It will look similar to the example below.
